

## Write a jQuery code to perform following

1. Test if jQuery is loaded.
2. Using jQuery find all textareas, and makes a border. Then adds all paragraphs to the jQuery object to set their borders red.
3. Set the background color red of the submit button using jQuery
4. Create a paragraph element with some text and append it to the end of the document body using jQuery.
5. Blink text using jQuery.
6. Limit character input in the textarea including count.
7. Change button text using jQuery.
8. Set background-image using jQuery CSS property.
9. How to get the selected value and currently selected text of a dropdown box using jQuery?
10. Disable a link using jQuery.
11. Set value in input text using jQuery.
12. Set a value in a span using jQuery.
13. Set href attribute at runtime using jquery.
14. Remove disabled attribute using jQuery.
15. Access HTML form data(Name,age,Mobile Number) using jQuery.  
(display in one alert box like Name,age,mobile number)
16. Handle button click event using JQuery.
17. Hide all headings on a page when they are clicked.
18. Double click on paragraph to toggle background color.
19. Change the background color of the `&lt;div&gt;` element of the following code on clicking the button.
20. Attach a function to the focus event. The focus event occurs (display a message regarding the text field) when the `&lt;input&gt;` field gets focus.
